

ABSTRACT OF THE DISCLOSURE

A reproducing device includes: a communicating portion for communication with a recording device; a still image display portion for displaying a still image received through the communicating portion; and a
5 video display portion for receiving a video corresponding to the still image displayed by the still image display portion through the communicating portion for display. The video display portion receives the video corresponding to the still image displayed by the still image display portion through the communicating portion, so that a user can reproduce a desired
10 video by a simple operation.
